## Tech Tips - Anonymise Data in IBM SPSS Modeler

## Tech Tips - Anonymise Data in IBM SPSS Modeler

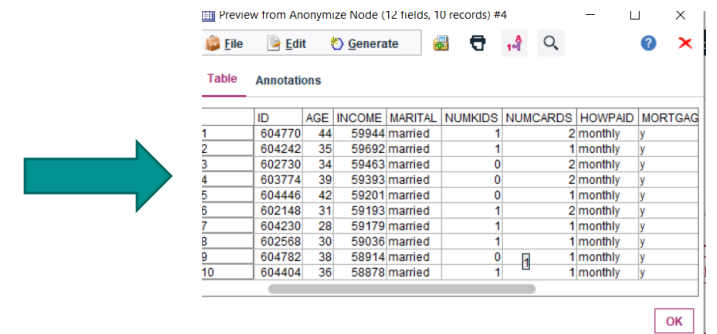

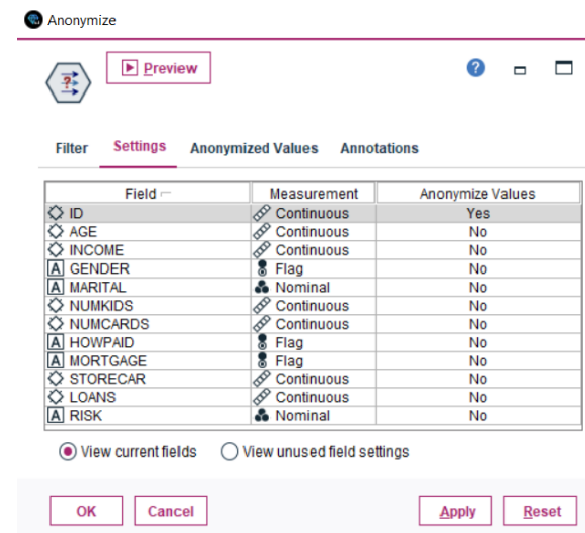

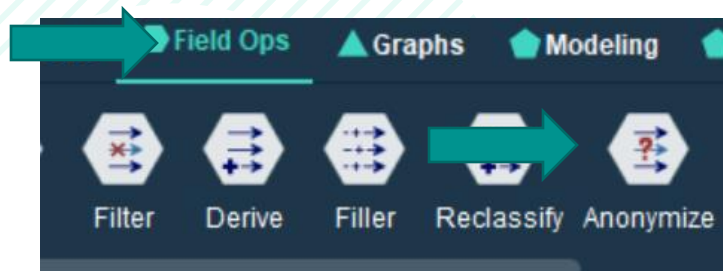

# Tech Tips - Anonymise Data

- Here's a quick tip to anonymise data in IBM SPSS Modeler.
- Go the **Field Ops** palette and select the **Anonymize** node to get started.

# Tech Tips - Anonymise Data

- To anonymize data go to the **Field Ops** palette. Select the **Anonymize** node and drag it onto the stream canvas. You can also double click the node to drop it onto the stream canvas. Once it is on the canvas you can connect it to your stream.
- Double click to open the node. The fields in the dataset are shown to the left. The option to anonymize data is shown on the right. In the **Anonymize Values** column select **Yes** to anonymize. Click on the Preview button to see your data. Note your data should be read in on the source node or on a type node.
