

Tech Tips - Disabling Nodes in a Stream in IBM SPSS Modeler

Tech Tips - Disabling Nodes in a Stream in IBM SPSS Modeler

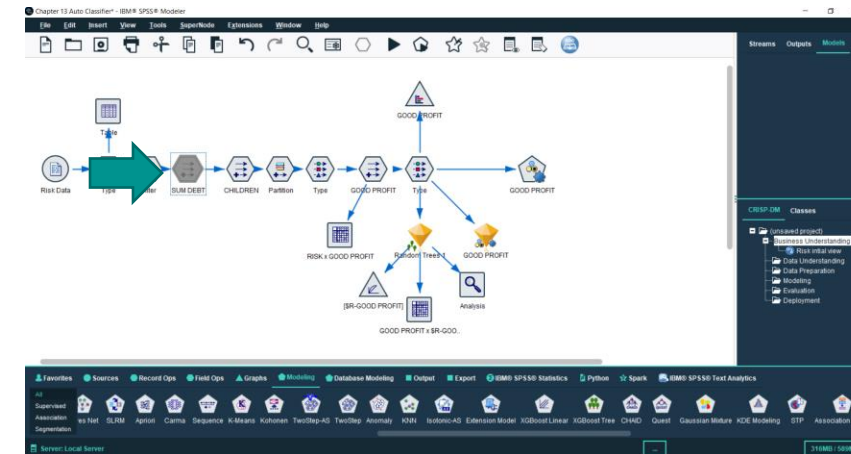

Tech Tips - Disabling a Node in a Stream

- Here's a quick tip to disable nodes in an IBM SPSS Modeler stream.
- Sometimes you may want to disable a node in a stream. For example, we have a **Derive** node and we want to disable this node to run the stream without this particular calculation. Disabling the node means it will be ignored when the stream is run. Users can disable and enable nodes as needed.

Tech Tips - Disabling a Node in a Stream

- To disable a node, right click on it and select **Disable Node**. The node will appear grey in the stream. When the stream is run this node will be ignored. The node can be enabled again by right clicking on it and selecting **Enable Node**.
