

Express Course: Data Transformations in IBM SPSS Statistics

IBM SPSS Statistics covers all steps of the analytical process and makes transforming data easy and transparent. In this express course, data will be brought into Statistics, and the most common data transformation tasks will be reviewed. The purpose of each transformation will be examined along with automated methods to transform large amounts of data.

This course will cover the following topics:

- Types of data and common types of data transformations
- Recoding data
- Visual binning
- Computing new fields
- Selecting cases
- Sampling cases
- Merging files
- Appending files

Course attendees will receive sample data files and step-by-step exercises that can be completed following the course.
