Express Course: Getting Started in IBM SPSS Modeler

This express course is an introduction to IBM SPSS Modeler. Attendees will learn the basics, such as working in Modeler, loading and auditing data, common data preparation tasks, and how to build models. Model building and evaluation will also be reviewed.

This course will cover the following topics:

- Main features of the user interface
- How to load and audit data
- How to quickly create new fields
- Model building and evaluation

Course attendees will receive sample data files and step-by-step exercises that can be completed following the course.
