Express Course: Getting Started in IBM SPSS Statistics

IBM SPSS Statistics is a comprehensive statistical platform. Users can bring data into Statistics, examine it, transform it, and run basic and advanced statistical analyses. In this two-hour course, we will introduce attendees to working in IBM SPSS Statistics.

This course will cover the following topics:

• Steps of the research process

• The user interface

• Opening data files

• Descriptive statistics

• Inferential statistical tests

• Automation of work

• How to save the output

Course attendees will also receive sample data files along with step-by-step exercises that can be completed after the course.
