Tech Tips - Find Recently Used Streams in IBM SPSS Modeler

Tech Tips - Find Recently Used Streams

- Here's a quick tip to find recently used streams in IBM SPSS Modeler.
- Sometimes you are working in Modeler, and want to open a recently used stream. To make this simple, you can go to the **File** menu and select **Recent Streams**.
- Hovering your cursor over a recently used stream shows its location. You can click on the stream and it will open. In the example below, we can see that there are now two streams open in the **Streams** manager. You can click on each stream to go back and forth between them.
